CHARACTERISTICS

The ULOR louvre is a dedicated accessory for luminaires from the SKVER range, compatible with the F and L variants, and designed to limit light emission to the upper half-space. Made from aluminium and finished in a matt black RAL 9005 coating, it improves light distribution control, helps reduce light pollution and enhances user comfort by minimising glare. It is ideal for urban and park lighting, on pedestrian routes and in locations subject to night sky protection requirements.

A specially designed shade ensures that the ULR remains below 1. In this version, the luminaire also takes on a unique character, enriching the urban landscape whilst safeguarding the natural environment and the dark sky.

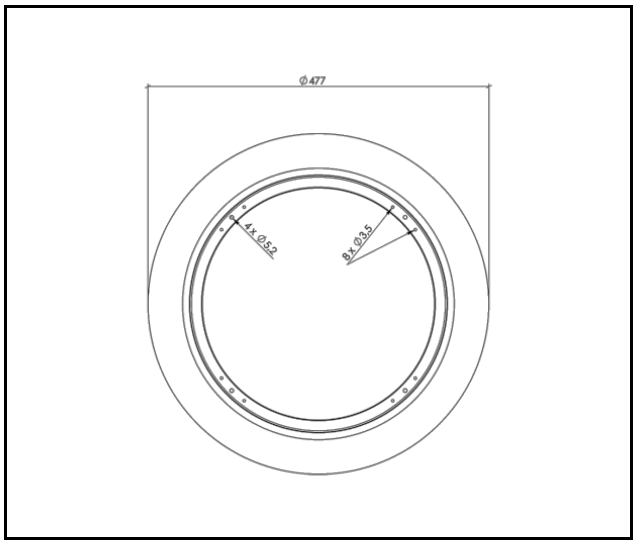

APPLICATION

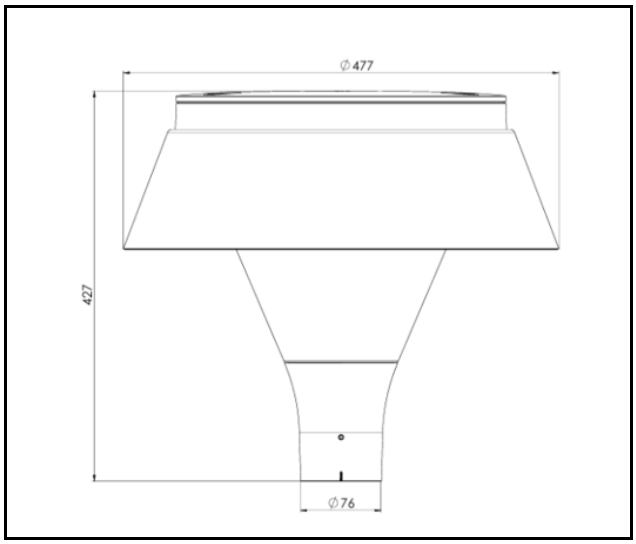

Used with SKVER F and SKVER L luminaires, it helps to protect the dark sky, reduces glare and gives the luminaire a unique character.
