## CHARACTERISTICS

The SKVER Backshield is an accessory fitted directly onto the luminaire, designed for SKVER luminaires in the A, F and L variants. This shield selectively restricts light distribution in a chosen direction and can effectively eliminate distracting glare should road conditions change after the luminaire has been installed, without the need to remove it.  It serves as a functional and aesthetic addition to the SKVER range of luminaires, ensuring better control of the light distribution.

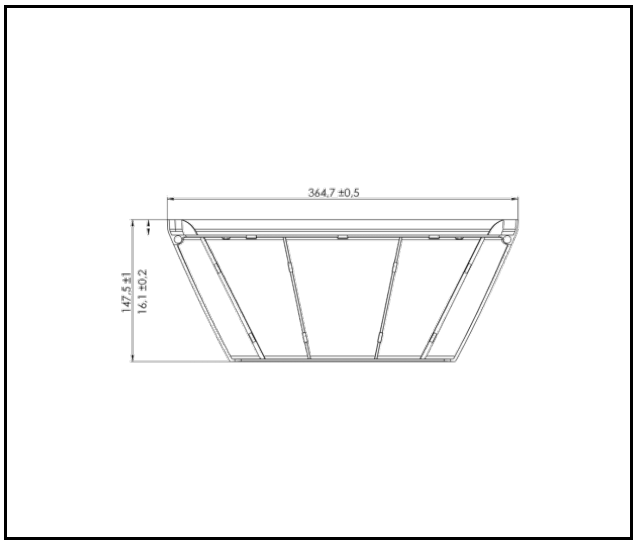

## APPLICATION

When used with SKVER A, F and L luminaires, it provides better control over light distribution, reduces unwanted light and makes it easier to adapt the installation to changing environmental conditions.
