CHARACTERISTICS

The SKVER Backshield is a dedicated accessory fitted directly onto luminaires from the SKVER range in the Z2 variant. The shield has been designed to selectively limit light distribution in a chosen direction, in particular towards the upper half-space, thereby effectively reducing glare and light pollution. It provides a practical solution in situations where environmental conditions or the characteristics of the space change after the luminaire has been installed, allowing the light distribution to be adjusted without the need to dismantle the luminaire.

APPLICATION

Manufactured from aluminium and DC01 structural steel, the Z2 version is finished with a durable matt black coating (RAL 9005); the Backshield serves as a functional and aesthetic complement to SKVER luminaires. It improves control of the light output, enhances user comfort by reducing harmful glare, and supports the protection of the night sky. It is particularly suitable for use in urban spaces, parks, pedestrian routes and locations subject to requirements regarding the limitation of light pollution. Furthermore, it gives the luminaire a unique visual character, enhancing the aesthetics of public spaces whilst maintaining high environmental standards.
